PROJECT:

Developed a 3D Visual Calender Application using C and C++ languages as a computer graphics and Visualization mini project.

Abstract about a the project :

A 3D visualisation toolkit for calendar data, powered by C/C++/OpenGL. Calendars are usually presented in the form of a two-dimensional grid. Although this representation is easy to display, it bears little relation to the actual structure of time and is not well-suited to indicating the relative importance and relationship between different events. The aim of this project is to explore other ways to present calendar information which might give a more vivid impression of time and events while providing the enhancement of rapid prioritised-event selection.
